April 2022

Thank you for downloading. I will endeavour to keep this publication up to date.

Choose your database wisely.

Depending on the number of staff (and volunteers) your organisation has, it is fair to say there can be major savings to be made when you choose your database wisely. I have worked with organisations who struggle with spreadsheets and wish they had better options but don't know where to look. One of the first questions I ask is – How many users do you have?

This means how many people require access to the information you wish to share internally? More details and options are required. The problem is how to choose from the growing number of online solutions. While spreadsheets or a Microsoft Access database might have given you the ability to share information and build reports – online solutions can provide so much more. Some are better than others and plenty are worth considering. The criteria we use to categorise our findings is as follows:

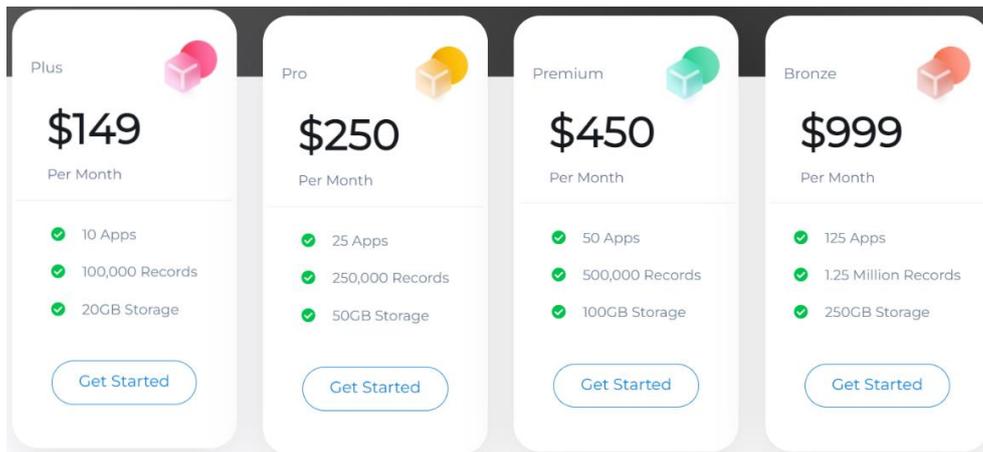

Cost Number of users Features Limitations

You might have other considerations, but these are how organisations are categorising products to small and medium sized business.

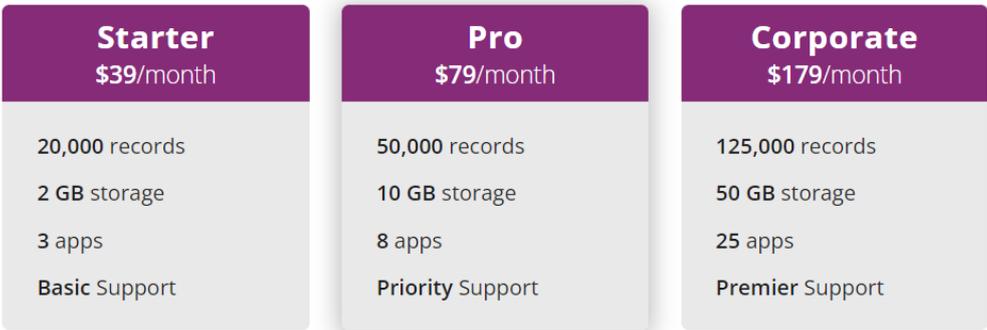

Cost / Number of users	Features available and limitations
<p>Common to see variety of plans / pricing available. Paying annually earns discount rather than monthly. For NON-PROFIT discount. Ask or see FAQs. It is highly recommended that you try out any free trials which will give you a real sense of what is possible and hopefully a general feel of comfort before you buy.</p> <p>Many plans/pricing schedules adapt to the number of users you need to access your system or functionality available.</p>	<p>Be aware from the outset what the product does and does not offer. While you can move up and down in the plans offered, don't pretend you can survive on the free or lowest paid plan for so long. It is rare to find an exact meet to your particular business needs and that's why there are so many products wanting your investment. Building a bespoke system is very possible. It is worth looking at the highest cost plan and see what you can gain and therefore what you could live without as you grow.</p>
<p>If your business grows then upgrade your plan to a higher cost allowing you often to avail of better functionality and more features.</p> <p>An increasing number of products offer unlimited personnel and guests on free or paid plans. Often paying more gives you more apps, storage, additional security, backups etc.</p> <p>Most products offer an enterprise version for larger organisations.</p>	<p>Many aspects of collecting huge amounts of data are not about the number of customers you have but rather the activities and communications you keep log of for your business. Some of this information can run into 1,000's of records very easily. More records often means more cost.</p>

Recommended Products

Product	Recommendation
<p>https://tadabase.io/pricing</p> 	<p>No-Code development are hot words and my favourite system builder of many is Tadabase. With unlimited users, records and scale this is the no messing platform you need for an incredible \$149 per month fee. If you have a dozen staff, this is by far the best possibility as unlimited volunteers and new staff can be added for free. Tadabase also looks and feels razor sharp.</p>

Plan	Price (Per Month)	Apps	Records	Storage
Plus	\$149	10	100,000	20GB
Pro	\$250	25	250,000	50GB
Premium	\$450	50	500,000	100GB
Bronze	\$999	125	1.25 Million	250GB

<p>https://www.knack.com/</p> 	<p>Knack has real potential to fulfil simple to complex database needs. Again unlimited staff / volunteers is a massive plus here. Watch out for the record and storage limit but a small to medium new business will still need quite a while to fill 20,000 records. Larger organisations are also given further options.</p>

<https://www.airtable.com/>

Are you trying to organise a growing business still using excel? Perhaps you have good reasons but its probably time to consider moving on if you want something more efficient. That something is probably [Airtable](#). Airtable presents an online option which is incredibly difficult to beat for ease of use and terrific functionality. The [free](#) version limits you to 1,200 records per “base” but if you have that much business in a month, then its worth upgrading a bit. The only real learning curve moving from excel to a relational database is sudden realisation and beauty of knowing that the earth is no longer flat. There is a real advantage seeing that one customer details record only needs to be ever entered once. It can be edited, updated and listed to see all your customers. Multiple jobs can be entered on a separate but related table and “linked” to your customer details record. If this is news to you – congratulations and welcome to the world of databases.

Free

For individuals or very small teams just getting started with Airtable

Free

Sign up

Free includes:

- ✓ Unlimited bases
- ✓ Up to 5 creators or editors
- ✓ Unlimited commenter & read-only users

- ✓ Enterprise-wide admin panel
- ✓ Ongoing Success Program
- ✓ Included Professional Services
- ✓ Add-On Professional Services

[Podio](#)

Understanding Podio
in 60 seconds

[Podio](#) is still my favourite among the extremely functional relational database possibilities. What you see is what you get. The Basic Plan, at £5 per person per month (for non-profits) is a great offer for a small team. This is an extremely functional choice to build relational databases. [These choices](#) give you what you need to move from broken outdated excel or MS Access databases. There is considerable ease compared with many tools I have used to simply understand this software and build an unlimited collection of apps very quickly indeed. Uploading your existing data is also very doable with excellent tools and easy to follow instructions. Make sure you understand Workflow Automation and if you need this functionality or not. It is possible to build extremely useful apps without extra workflows.

<https://www.notion.so/>

Notion brings a cool collection of possibilities to play in a clean sheet approach. Add blocks, pages, links, folders, and all types of databases. These can be shared with collaborators, team members, or even relatives. This could be well worth a look if you like playing around and changing things every week to add stuff. Endless possibilities. There is a bit of a learning curve to knit things together. Winner of snazzy looks and flexibility. <https://www.notion.so/> See pricing [here](#).
